AETOS ONE MEET
PRIVATE VIDEO · ELDER CARE

AETOS ONE MEET

The house that calls for help. The TV that answers by itself.

Your own private video platform — where a fall, a button or a Sunday schedule can open a call, and the television in your parent's living room joins it with nobody pressing anything.

Nothing to press

The elder never touches it. A sensor, a schedule or the family starts the call.

Off by default

No always-on camera, no feed, no stream. Nothing happens until an event opens a room.

You own it

Runs on your own server under your own name. Video and recordings never leave it.

WHAT IT DOES

Five moments where a call has to connect — and now does.

Aetos One

Every video product in the world stops at the same wall: somebody at the far end has to accept. Aetos One Meet removes that wall.

THE SIX SECONDS

From a fall on the floor to a face on the screen.

0 s

A fall sensor in the room detects the event. Radar, wearable or camera-based — any brand.

1 s

The sensor tells the Aetos One OS Gateway in the house. Nothing has left the building.

2 s

The Gateway makes one secure outbound call: "start the Living Room meeting."

3 s

The server opens the room and pages every phone, laptop, care desk and TV that belongs to it.

4 s

The television wakes, switches input and joins. Nobody touched a remote.

6 s

The daughter's phone rings full-screen. One tap — she is looking into the room.

A fall becomes a face on the TV

The elder does nothing. The house calls the family, the television joins, and the first person to answer is looking in.

AVAILABLE NOW

The washroom, watched without a camera

A presence sensor and a timer. Too long or too still, a gentle voice asks first. No answer — the call opens outside the door.

AVAILABLE NOW

Sunday, on the big screen

Every Sunday at seven the room starts itself. Grandmother sees the family at full size from her own chair — no app, no password.

AVAILABLE NOW

The TV that answers by itself

A small kiosk behind any television wakes it, switches input and joins with a credential it already holds. When it's over, cricket is back.

AVAILABLE NOW

Doctor, nurse and family — one call

The nurse presses one button at the bedside. The patient's kiosk, the duty doctor and the family are paged together. Recorded to your server.

AVAILABLE NOW

UNDERNEATH ALL OF THEM

An alert starts as a question.

An alarm that jumps straight to video every time gets switched off within a fortnight, because most of the time nothing is wrong. Most events never leave rung one.

RUNG 1

Quiet

Normal movement, normal duration. No event, no log, nobody disturbed.

RUNG 2

A gentle prompt

A voice on the speaker: "Amma, are you alright?" A word or a pull-cord clears it.

RUNG 3

Audio into the room

The family can speak into the house and be heard through the door.

RUNG 4

Video on the screen

The living-room TV opens the room. The family can see and talk.

RUNG 5

Escalate

Next contact on the list, then the care desk — until someone acknowledges.

PRIVACY IS WHY PEOPLE BUY

Presence, not pictures. Dignity by design.

Aetos One

A family that suspects it is installing surveillance on a parent will install nothing at all. These are rules, not settings.

Off by default

Cameras and microphones do nothing until an event or a person opens the room. For 23 hours and 55 minutes a day, nothing is happening.

No camera in the bathroom. Ever.

A presence sensor reports occupancy and stillness as numbers. Any call opens on the living-room screen, outside the door.

The video belongs to you

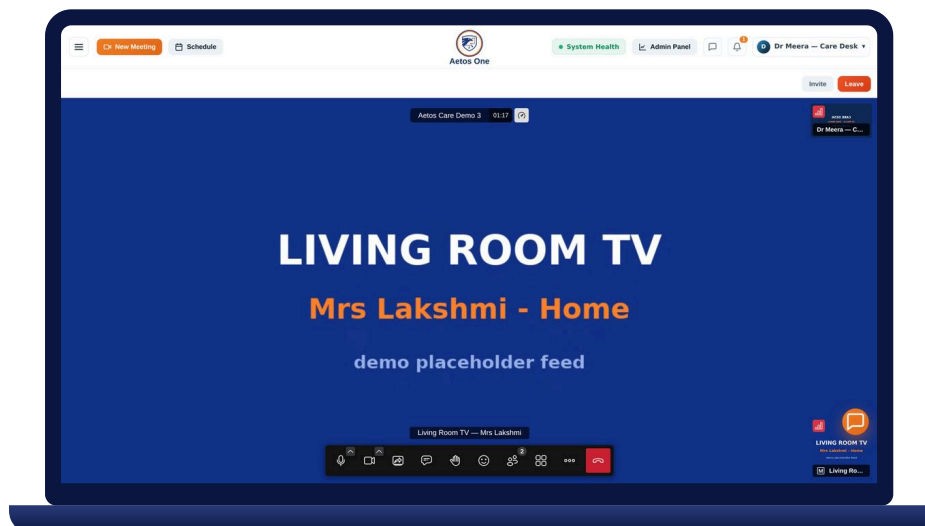

The service and every recording live on your own machine. No vendor abroad holds your family's footage.

Nothing opened on your network

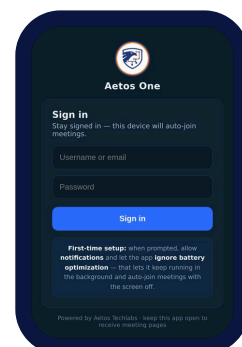

The Gateway makes outbound requests only. No inbound port, no remote login into the household.

A kiosk is not a person

The TV is marked as equipment. Never a moderator, never counted as a participant, always labelled [TV] in the call.

Captured live on the production system — the large tile is the kiosk in the elder's living room, the small tile is the care desk.

The Android app: sign in once, stay resident, ring full-screen.

The meeting server

Your own private video service, under your own name and web address.

The portal

Rooms, people, kiosks, schedules, roles and usage reports — one sign-in for the administrator.

The pager

Opens a room from a sensor, a button, a schedule or a person and pulls in every device that belongs.

The Aetos One OS Gateway

The small computer in the house that listens to sensors and makes the one outbound request.

The kiosk

A small player behind any HDMI television. Wakes it, switches input, joins, returns to standby.

The mobile app

Android app that rings full-screen — screen off, in a pocket — and is in the room with one tap.

ALSO, A FULL MEETING PLATFORM

The office pays for it. The family is why it matters.

Everything a business expects from a meeting product, on a server it owns.

Named rooms

Scheduling + calendar files

Reminder emails

Screen share

Whiteboard

Chat & reactions

Recording to your storage

Lobby & passwords

Expiring guest links

Five roles

Partner-scoped admin

Usage reports (PDF / spreadsheet)

WHERE ELSE IT FITS

Anywhere someone must be seen and can't operate a device.

Aetos One

The eldercare story opens the door. The same platform and the same installation serve a much wider market.

Eldercare at home

Hands-free TV calling, fall and washroom escalation, scheduled family calls.

Assisted living

A kiosk in every room, family paged directly, duty-desk view of who is online.

Home nursing & palliative

One-button bedside escalation with the patient visible; recorded to your server.

Schools & colleges

Named rooms per class, moderator control, recording for absentees, classroom kiosks.

Plants & utilities

A button at the machine opens a room; the shop-floor kiosk and the specialist join with no login.

Retail chains

One scheduled room pages every store kiosk at 9 a.m. Nobody in-store does anything.

Corporate & government

A full private meeting platform where the data must stay inside the organisation.

Farm houses & remote sites

One button at the gate house opens a room to the owner's phone, wherever they are.

"Is somebody watching my mother all day?"

No. Nothing streams and nobody has a window into the house. The normal state of the system is off.

"Does she have to press anything?"

No. The television answers by itself. If she wants to start a call, there is one physical button on the table.

"What if the internet goes down?"

Sensors and local automations keep working in the house. The call itself needs internet, like any call — a mobile dongle gives certainty.

"Is this a subscription?"

The software runs on your infrastructure. Commercial terms — one-time, annual or managed — are agreed per deployment.

TO GET STARTED

Four things, and a rehearsal.

- A television with a spare HDMI port and power behind it
- Which rooms matter — and which are out of bounds
- An internet connection (a second path for certainty)
- Who should be reached, in what order, after how long

See it in thirty seconds.

Press a button; a television across the room wakes up and joins a call on its own. Book a demonstration — or ask about becoming a channel partner.
